

ANMF (Vic Branch) Policy

Graduate programs – registered nurses and registered midwives

Preamble

Graduate programs play an important role in supporting newly graduated nurses and midwives to transition into the role of registered nurse or midwife. They assist beginning practitioners to consolidate knowledge and skills and to practice independently. Graduate programs also provide health services with access to a sustainable and well prepared nursing and midwifery workforce and in turn, provide community access to high quality safe nursing and midwifery care and improved health outcomes.

Policy

It is the position of ANMF (Vic Branch) that:

1. Graduate programs should provide a structured outcome based framework to help newly graduated nurses and midwives consolidate knowledge and skills obtained during their undergraduate educational preparation.
2. All newly graduated registered nurses and midwives should have timely access to a quality graduate program of their choice.
3. Completion of a graduate program is not mandatory and should not be a prerequisite requirement for the graduate registered nurse or midwife seeking employment.
4. Graduate program positions should be advertised transparently and in a timely manner.
5. Graduate programs should be aligned with the best practice principals outlined in the *Early Graduate Nurse Program Guidelines 2009 Nurse Policy Guidelines* (Department of Health, 2009).
6. Graduate programs should address the individual transition needs of graduates and be delivered in an environment that values their contribution as a graduate and supports their professional development.
7. Transition from undergraduate student in the academic setting to a registered nurse/ registered midwife in the clinical setting can be challenging, stressful and lead to 'transition shock' (Duchscher, 2009; Ostini and Bonner, 2012; Price, 2014; Fenwick, et al, 2012; and Healy and Howe, 2012). Therefore, graduate programs must be provided in a positive learning environment and organisational culture which is safe, nurturing, respectful and supportive of the new graduate.
8. Graduate programs should provide or enable:
 - i. Structured ward orientation
 - ii. Appropriate supernumerary time provided according to the individual transition needs of the graduate
 - iii. Study days for structured professional development
 - iv. Structured opportunity for facilitated reflection
 - v. Timely access to peer support and clinical support staff such as preceptors, clinical educators and graduate program coordinators

- vi. Setting of individual goals which are realistic, objectively measurable and achievable. Graduates should also be provided with a graduate handbook which outlines requirements and expectations of their participation within the graduate program
 - vii. Performance appraisals which are implemented in a collaborative, non-punitive and constructive manner
 - viii. A fair and transparent mechanism to provide formal and informal constructive feedback
 - ix. Rotations which are suited to the individual graduate and which support the graduate to develop confidence and competence and reduce 'transition shock'
 - x. Gradual or staggered introduction to working a rotating roster and or varying shifts to ensure acclimatization to shift work while maintaining access to clinical support staff
 - xi. Graduate midwives should be provided the opportunity to gain clinical experience in all areas of pregnancy, birth and post-natal care
 - xii. Specialist mental health graduate programs build on a comprehensive educational preparation and encompass broad knowledge and skill relating to mental health nursing
 - xiii. New graduates should not be required to perform in charge roles which are outside of the scope of practice of a beginning practitioner
9. If newly graduated nurses and midwives are unable to obtain access to a formal graduate program, employers should provide the new graduate appropriate support to help them consolidate and expand knowledge and skills obtained during their undergraduate degree. This can occur through implementing all elements of the best practice principals outlined in the *Early Graduate Nurse Program Guidelines 2009* (Department of Health, 2009) and in particular provide:
- i. A positive learning environment and organisational culture which is safe, nurturing and supportive of the new graduate
 - ii. Timely access to peer support and clinical support staff such as preceptors, clinical educators and graduate program coordinators
 - iii. Setting of individual learning goals which are realistic, objectively measurable and achievable
 - iv. A fair and transparent mechanism to provide formal and informal constructive feedback
